

ULTRA FAST 3D ENVIRONMENT RECON FROM MULTIPLE FEEDS

The Lattice SDK routes camera feeds and sensor context into ENEL, Exark's splat service, creating fast 3D scene outputs directly inside the Lattice operating workflow.

90S CAPTURE WINDOW - 2 CAMERA FEEDS

CURRENT FIT

Lattice already centralizes video and sensor context. ENEL turns those inputs into a navigable scene layer that can sit inside the existing Lattice workflow.

DEFENSE APPLICATIONS

FACILITY AWARENESS

Turn available feeds into a shared 3D view of a base, facility, or critical infrastructure site.

MISSION PLANNING

Give operators spatial context for pre-briefs, route review, and remote site familiarization.

LATTICE PATH

ENEL outputs a 3D Gaussian splat: a navigable scene reconstruction generated from available feeds and sensor context, then surfaced through Lattice.

FLOW

LATTICE SDK > CAMERA FEEDS + SENSORS > ENEL SPLAT SERVICE > LATTICE SCENE LAYER

THE ASK

ANDURIL LATTICE PARTNER

Sponsor Exark into the Lattice Partner Program and identify the product owner for scene-layer review.

MENTOR-PROTEGE MPP INTRO

Introduce Exark to a potential mentor for a mentor-protege or MPP relationship tied to Lattice-relevant pilots.

PRE-SALES DEMOS

Use ENEL in Anduril pre-sales and customer walkthroughs where fast 3D scene context helps communicate Lattice value.
